Integrate Inhibitor Resistance Selections Initiated with Drug Resistant HIV-1

K Andrea*, S Chang, R Martin, M Willikom, and KL White

Gilead Sciences, Inc., Foster City, CA

Poster 546

Introduction

The current depth and breadth of resistance to antiretroviral therapy (ART) is constant.

Objectives

- To confirm the high barrier to resistance of BIC.
- To confirm the high barrier to resistance of DTG.
- To determine if clinical resistance to BIC is associated with improved resistance to DTG.
- To determine if clinical resistance to DTG is associated with improved resistance to BIC.

Methods

- Treatment with BIC or DTG.
- Resistance to other drugs.
- Clinical resistance.
- Viral Sequencing.

Results

- Resistance to other drugs.
- Clinical resistance.
- Viral Sequencing.

Conclusions

- Drug resistance in HIV.
- Clinical resistance in HIV.
- Viral Sequencing in HIV.
